About This Document

Purpose and Audience

This document provides descriptions of the interfaces, pin assignments, and specifications of Broadcom® BCM20736S Bluetooth Low Energy (BLE) System-in-Package (SiP) module. It is intended for designers who are responsible for adding the BCM20736S module to wireless input devices including heart-rate monitors, blood pressure monitors, proximity sensors, temperature sensors, and battery monitors.

Acronyms and Abbreviations

In most cases, acronyms and abbreviations are defined on first use.

For a comprehensive list of acronyms and other terms used in Broadcom documents, go to:
<http://www.broadcom.com/press/glossary.php>.

Document Conventions

The following conventions may be used in this document:

Convention	Description
Bold	User input and actions: for example, type exit , click OK , press Alt+C
Monospace	Code: #include <iostream> HTML: <td rowspan = 3> Command line commands and parameters: w1 [-1] <command>
< >	Placeholders for <i>required</i> elements: enter your <username> or w1 <command>
[]	Indicates <i>optional</i> command-line parameters: w1 [-1] Indicates bit and byte ranges (inclusive): [0:3] or [7:0]

Technical Support

Broadcom provides customer access to a wide range of information, including technical documentation, schematic diagrams, product bill of materials, PCB layout information, and software updates.

Customers who work directly with Broadcom, can acquire technical documentation and software from the Broadcom CSP (<https://support.broadcom.com>). For a CSP account, contact your Sales or Engineering support representative.

Customers who work with Broadcom through a distribution channel can acquire technical documentation and software from the Broadcom Support Community website (<https://community.broadcom.com>).

In addition, Broadcom provides other product support through its Downloads and Support site (<http://www.broadcom.com/support/>).

Overview

The BCM20736S is a compact, highly integrated Bluetooth low energy (BLE) system-in-package (SiP) module. The BCM20736S SiP includes an embedded BLE antenna, 24 MHz clock, and 512 Kb EEPROM, so only a minimal set of external components is needed to create a standalone BLE device.

The BCM20736S is designed to accelerate time to market. The Bluetooth stack and several application profiles are built into the module, allowing customers to focus on their core applications. To further reduce application development time, the BCM20736S includes integrated software support, with one-click installation of the complete environment and a one-click compile/build/link/load cycle. All this, coupled with an ultrasmall form factor and support for a wide voltage range, makes the BCM20736S well suited for virtually any Bluetooth Smart application.

Features

- ARM Cortex-M3 microcontroller unit (MCU)
- Embedded 512 Kb EEPROM
- Broadcom Serial Control (BSC), SPI, and UART interfaces
- FCC and CE compliant
- RoHS compliant, certified lead- and halogen-free
- Moisture Sensitivity Level (MSL) 3 compliant
- 6.5 mm × 6.5 mm × 1.2 mm Land Grid Array (LGA) 48-pin package

Application Profiles

The following profiles are supported in BCM20736S ROM:

- Battery status
- Blood pressure monitor
- Find me
- Heart rate monitor
- Proximity
- Thermometer
- Weight scale
- Time
- Blood glucose monitor

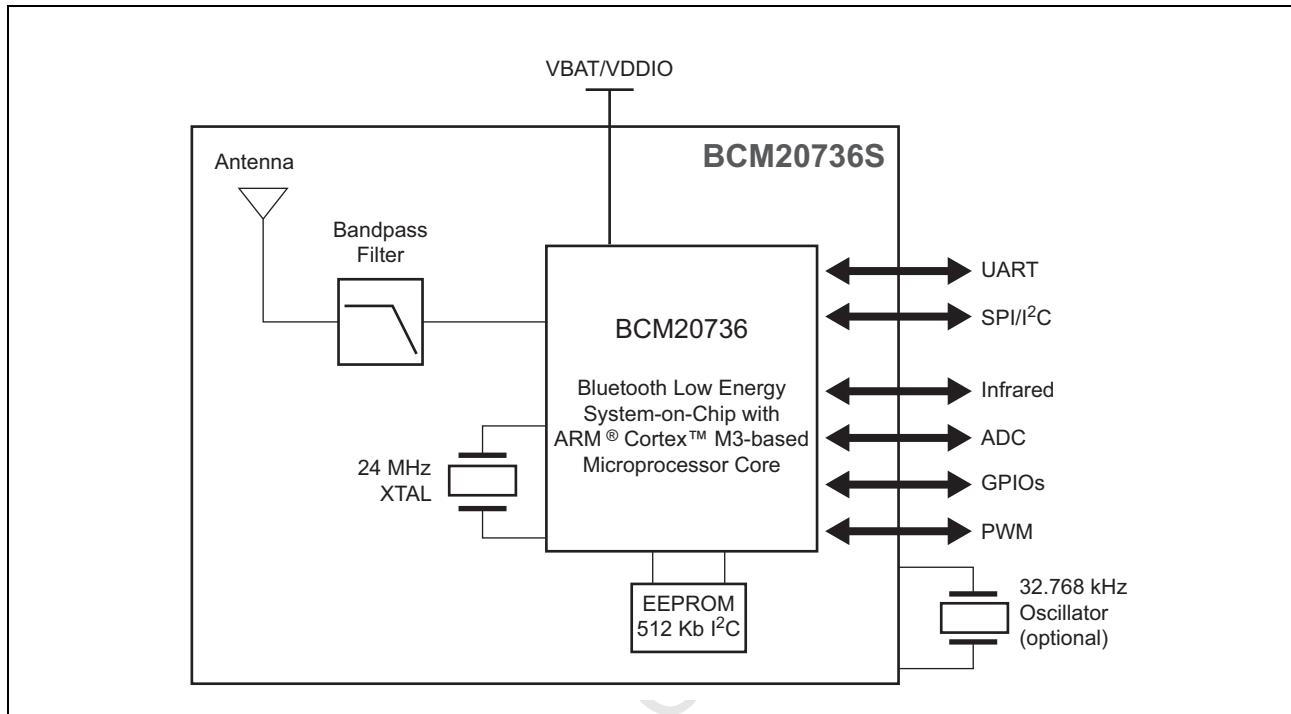

Additional profiles that can be supported in BCM20736S RAM include:

- Blood glucose monitor
- Temperature alarm
- Location
- Other custom profiles

Block Diagram

A block diagram of the BCM20736S BLE SiP is shown in [Figure 1](#).

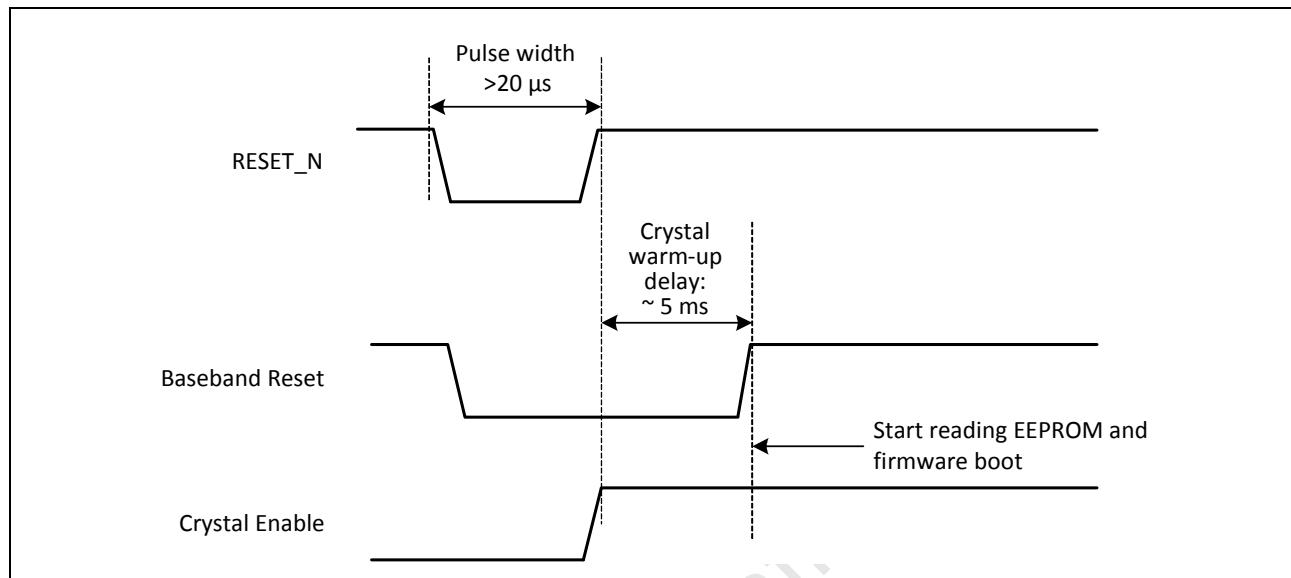

Figure 1: BCM20736S BLE SiP Block Diagram

External Reset

External reset timing for the BCM20736S is illustrated in [Figure 2](#).

Figure 2: External Reset Timing

32.768 kHz Oscillator

The BCM20736S includes a standard Pierce oscillator. The oscillator circuit includes a comparator with hysteresis on the output to create a single-ended digital output. The hysteresis eliminates chatter when the input is near the comparator threshold (~100 mV). The oscillator circuit can be designed for a 32 kHz or 32.768 kHz crystal oscillator, and can also be driven by an external clock input with a similar frequency. Characteristics for a 32 kHz oscillator are defined in [Table 1](#).

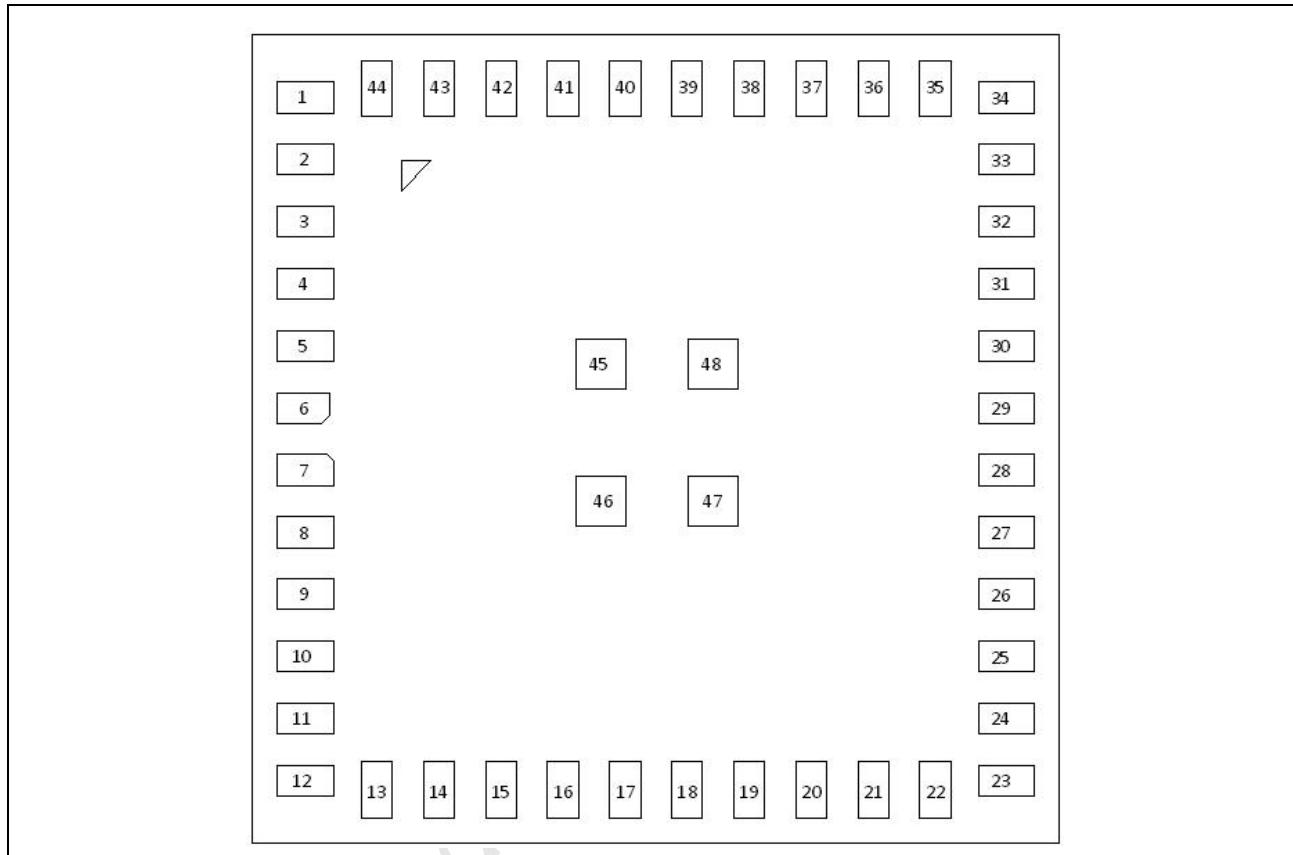

Table 1: 32 kHz Crystal Oscillator Characteristics

Parameter	Symbol	Conditions	Min.	Typ.	Max.	Unit
Output frequency	F_{oscout}	—	—	32.768	—	kHz
Frequency tolerance	F_{tol}	Crystal-dependent	—	100	—	ppm
Start-up time	$T_{startup}$	—	—	—	500	μs
Crystal drive level	P_{drv}	For crystal selection	0.5	—	—	μW
Crystal series resistance	R_{series}	For crystal selection	—	—	70	$k\Omega$
Crystal shunt capacitance	C_{shunt}	For crystal selection	—	—	1.3	pF

Pin Map and Signal Descriptions

The BCM20736S pin map is shown in [Figure 3](#).

Figure 3: BCM20736S (TOP View)

The signal name, type, and description of each pin in the BCM20736S is listed in [Table 2 on page 11](#). The symbols shown under I/O Type indicate pin directions (I/O = bidirectional, I = input, O = output) and the internal pull-up/pull-down characteristics (PU = weak internal pull-up resistor and PD = weak internal pull-down resistor), if any.

PCB Design and Manufacturing Recommendations

Pad and Solder Mask Opening Dimensions

BCM20736S pad and solder mask opening dimensions are defined in [Table 12](#).

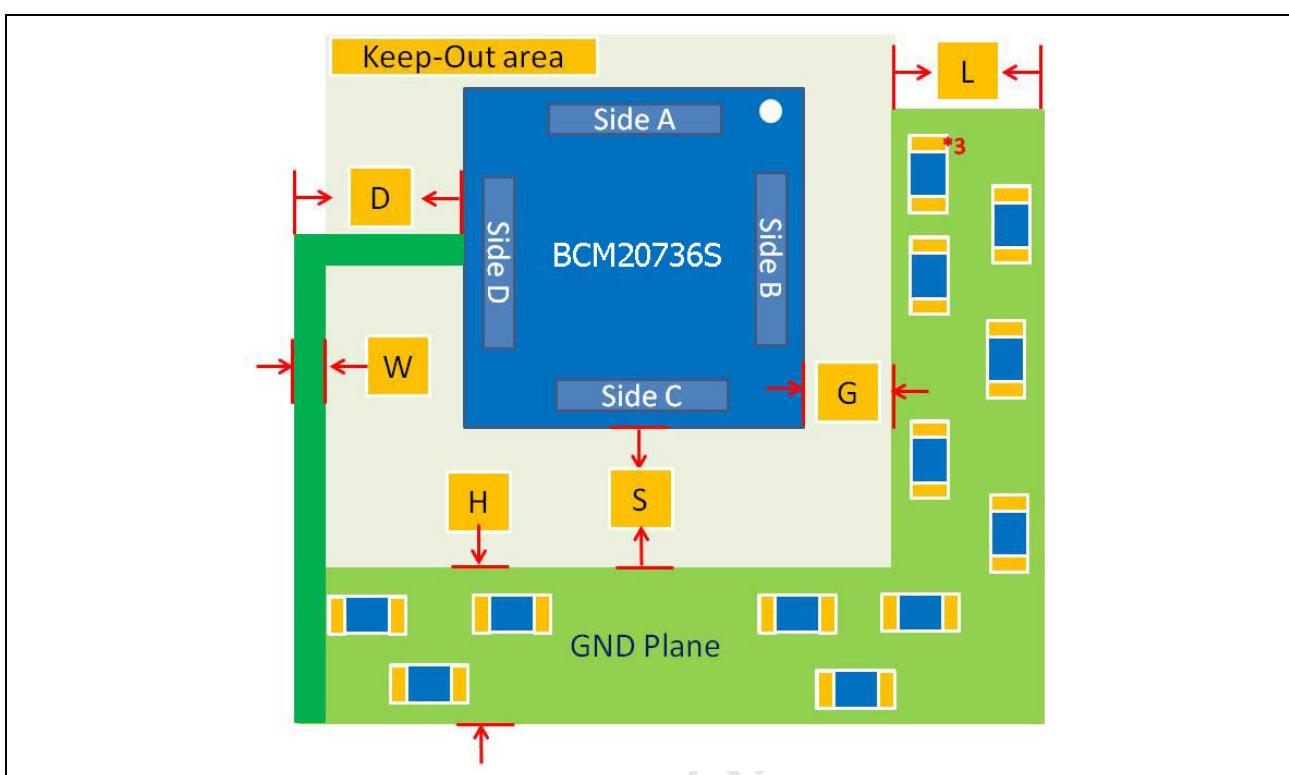

Table 12: Pad and Solder Mask Dimensions

Pad Type	Pad Dimensions	Solder Mask Opening Dimensions	Unit
Type A	0.6 × 0.25	0.7 × 0.35	mm
Type B	0.55 × 0.3	0.65 × 0.4	
Type C	0.4 × 0.4	0.5 × 0.5	

PCB Layout Recommendations

The following layout recommendations are referenced to [Figure 8 on page 22](#).

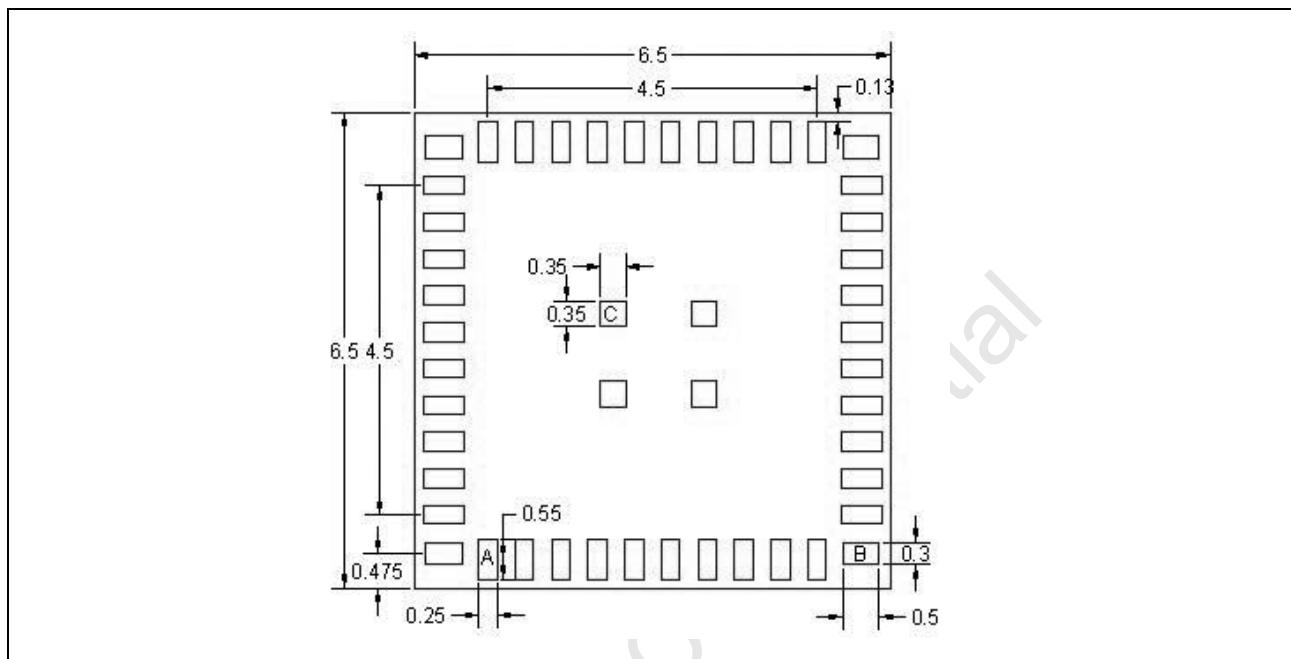

- Connect to system ground from side D of the module (pins 13–22).
- The L-shaped ground plane is required for the embedded BLE antenna. Keep the GND continuous. Do not cut off the GND shape to accommodate trace routes.
- An L-shaped ground plane is required. If the L-shaped GND plane is located on the top layer of the PCB, do not place components on the ground plane. If this cannot be avoided, move the L-shaped ground plane to another layer.
- Antenna efficiency of 31–41% can be achieved based on the layout in [Figure 8 on page 22](#) and the dimensions listed below. Following these layout recommendations is expected to yield 50+ meters of usable range; deviating from these recommendations may reduce the range of the antenna.
 - D: 4.5 mm (typical)
 - G, H, S: 3 mm (typical)
 - L: 3 mm (minimum)
 - W: 0.4 mm (typical)
- Route signal traces out of the module from side C (between pins 27 and 30) or side D (between pins 16 and 19) of the module. Traces can be overlapped to avoid routing through the keep-out area.
- Do not route traces from side A or side B.

Figure 8: PCB Layout Example

PCB Stencil

The recommended PCB stencil is shown in [Figure 9](#) (all measurements in mm). Use an unsolder mask to set the module footprint.

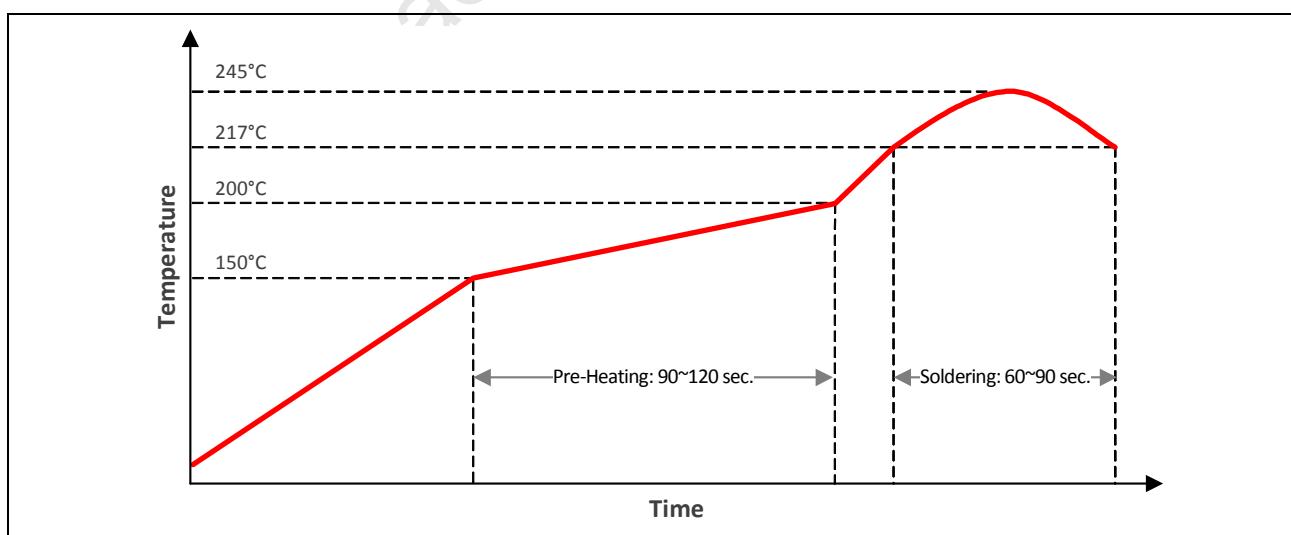

Figure 9: BCM20736S Stencil (Bottom View)

Solder Reflow

The recommended solder reflow profile for the BCM20736S is defined in [Figure 10](#).

Figure 10: Solder Reflow Profile

Packaging and Storage Information

The BCM20736S is available in a tape and reel package and is shipped in an ESD-protected moisture-resistant (MSL-3) bag as shown in [Figure 11](#). The storage temperature range is -40°C to $+125^{\circ}\text{C}$.
