

I started getting this when trying to run an experiment (see page 28 thru 33 of CapSense_CSD v3.20 datasheet) ... I could not fix it. I built a new project with a new project name but this ERROR came up the first time I got to Launch Tuner application and clicked Configuration to open the Tuner Communication dialog.

Would someone tell me: How to proceed... fix it, clean it, restart and/or understand where it comes from? Thanks TDGM aka Tim Miner
